Exclusive Offer for
Contributing members of the
VIC STAFF Associations / Unions

in two top private hospitals in Vienna -
“Privatklinik Döbling” and “Privatklinik Confraternität”

Individual preventive health care

A healthy life-style can positively influence or even prevent a large number of diseases and significantly improve your quality of life. Nevertheless, regular check-ups for early detection of diseases and a timely therapy are decisive factors in maintaining and recovering your health.

Preventive care programs ("Medical Care") offered by PremiQaMed preventive care centers are carried out by our two Vienna based Private Hospitals "Döbling" and "Confraternität" in an exclusive atmosphere, practically without waiting times.

Screening programs can be composed of the following modules:

Standard Modules

- Basic module
- Internal performance check
- Men's health / cancer check-up
- Women's health / cancer check-up
- Healthy skin

Diagnostic imaging package

Ultrasound of upper abdomen, kidney, retroperitoneal space, carotid, thyroid gland

Basic module

The basic module constitutes the foundation of individual medical prevention. In the course of the anamnesis genetic and life style risks are defined. Laboratory tests of blood and urine provide valuable information about the current health condition of the organism. A thorough clinical examination is carried out by specialists of internal medicine. During the final discussion of all medical findings measures for the improvement of the health condition are defined.

- Medical history
- Lifestyle factors, BMI
- Thorough clinical examination
- Laboratory analysis (blood, urine)
- Lung function test
- Final discussion of medical findings

Internal performance check

- Assessment of personal risk factors
- ECG at rest
- Exercise electrocardiogram
- Echocardiography

Men's Health / cancer screening

- Medical history and assessment of personal risk factors
- Clinical urologic examination
- Ultrasound of the prostate
- PSA determination
- Uroflowmetry

Women's Health / cancer screening

- Medical history and assessment of personal risk factors
- Clinical gynecologic examination
- PAP smear
- Vaginal ultrasound
- Palpation of the breast
- Laboratory examination including hormone status

Healthy Skin

- Medical history and assessment of personal risk factors
- Clinical dermatologic examination
- Determination of skin type
- Reflected light microscopy scanning
